Continuation of 11. does NOT place the application in condition for allowance because: Applicant's argument is based on the contention that a portion of Noar identified in the rejection of the claims (in particular, the Office action points to column 9, lines 18-19 that recites, "[r]esponse to CA's update: The diretory updates the tree according to the modified parameters received from the CA."), "does not show that a transmitting apparatus broadcasts information," as defined in applicant's claims. Examiner respectfully disagrees. Noar explicitly discloses the CA sends modification parameters to a directory, which encompasses any type of information to update the tree at the directory end, (col. 9:4-11 and 18-19) and the directory is defined as one or more non-trusted parties that get updated certificate revocation information from the CA and serve as a certificate database accessible by the users. (col. 4:1-3) Moreover, because applicant's specification does not place a special meaning on the term "broadcast," the term "broadcast" is given its plain mean as understood in the art: to simultaneously send the same message to multiple recipients (see dictionary.com, Microsoft Computer Dictionary or equivalent). Because Noar discloses modification parameters are sent to a directory and a directory is one or more parties, these parameters are sent to one or more parties; hence, Noar discloses a transmitting apparatus broadcasts information contrary to applicant's allegations.

In reply to applicant's remaining arguments that Noar does not teach the first detecting means and second detecting means, these limitations where identified as being taught by Noar in paragraph 8 in the Office action mailed on 1/11/06.
